# What is Programming?

1

## Problem Solving

Programming is the art of breaking down complex problems into smaller, manageable steps and then writing instructions for the computer to follow to solve those problems.

2

## Creativity and Automatic Tasking

Programming allows you to bring your ideas to life and create something unique. It is a way to express your creativity and solve various difficult amazing problems automatically.

3

## Logic and Thinking

Programming requires logical thinking and the ability to break down problems into their components. It helps develop critical thinking skills.

# Types of Programming Languages

## 1 Low-Level Languages:

- **Machine Language:** Binary code directly executed by the computer.
- **Assembly Language:** Uses symbolic code and is closer to machine language.

## 2 High-Level Languages:

- **Object-Oriented Languages:** Python, Java, C++ (Based on objects and classes).
- **Scripting Languages:** Python, JavaScript, PHP (Automate tasks, often interpreted).
- **Markup Languages:** HTML, XML (Web development)
- **Concurrency-Oriented Languages:** GO, Rust (to handle parallel computations)

# Why Python?

Easy to Learn

Interpreted Language

Object-Oriented Language

Works on Different Platforms  
(Windows, Mac, Linux etc.)

Extensive Standard Library

High-Level Language

Open Source

Large Community

Developer Community

# Python

- ❑ It was created by Guido van Rossum, and released in 1991.
- ❑ Python is a versatile and beginner-friendly programming language that can help you create amazing things, from websites to video games.
- ❑ Python 3 has a simple syntax that is simple to understand and read, making it a good choice for beginners.
- ❑ It is a high-level language that has a large standard library and many third-party libraries available, making it a versatile language that can be used for a wide variety of applications.
- ❑ Python 3 has good support for data analysis and scientific computing, with libraries such as NumPy and Pandas.

# Python Career Opportunities

## Web Development

Backend Developer, Full Stack Developer

## Data Science

Data Scientist, Data Analyst, Machine Learning Engineer

## Game Development

Game Developer, Game Scripter

## Automation

Automation Engineer, DevOps Engineer.

# Python Career Opportunities (Cont..)

## Software Development

Software Engineer, Python Developer

## Cybersecurity

Security Analyst, Penetration Tester, Ethical Hacker

## Artificial Intelligence (AI) and Machine Learning (ML):

AI Engineer, ML Engineer, Research Scientist

## Education and Training

Instructor, Curriculum Developer

# # Let's Start Coding

# Different IDE Tools for Python

1. PyCharm

3. Jupyter Notebook

2. Visual Studio Code (VS Code)

4. Spyder

5. Others: Sublime Text, Atom, Notepad++ etc.

# Setting Up the Development Environment

1

## Install Python

The first step is to download and install the latest version of Python on your computer.

<https://www.python.org/downloads/> , <https://www.jetbrains.com/pycharm/download> ,  
<https://www.anaconda.com/download>

2

## Choose an IDE

An Integrated Development Environment (IDE) is a software application that provides a comprehensive set of tools for writing, testing, and debugging code.

3

## Start Coding

With Python and your chosen IDE installed, you're ready to start coding and exploring the exciting world of programming!

# Our First Python Program

- Open your IDE or text editor
- Create a new file named hello.py
- Type the following code:

main.py

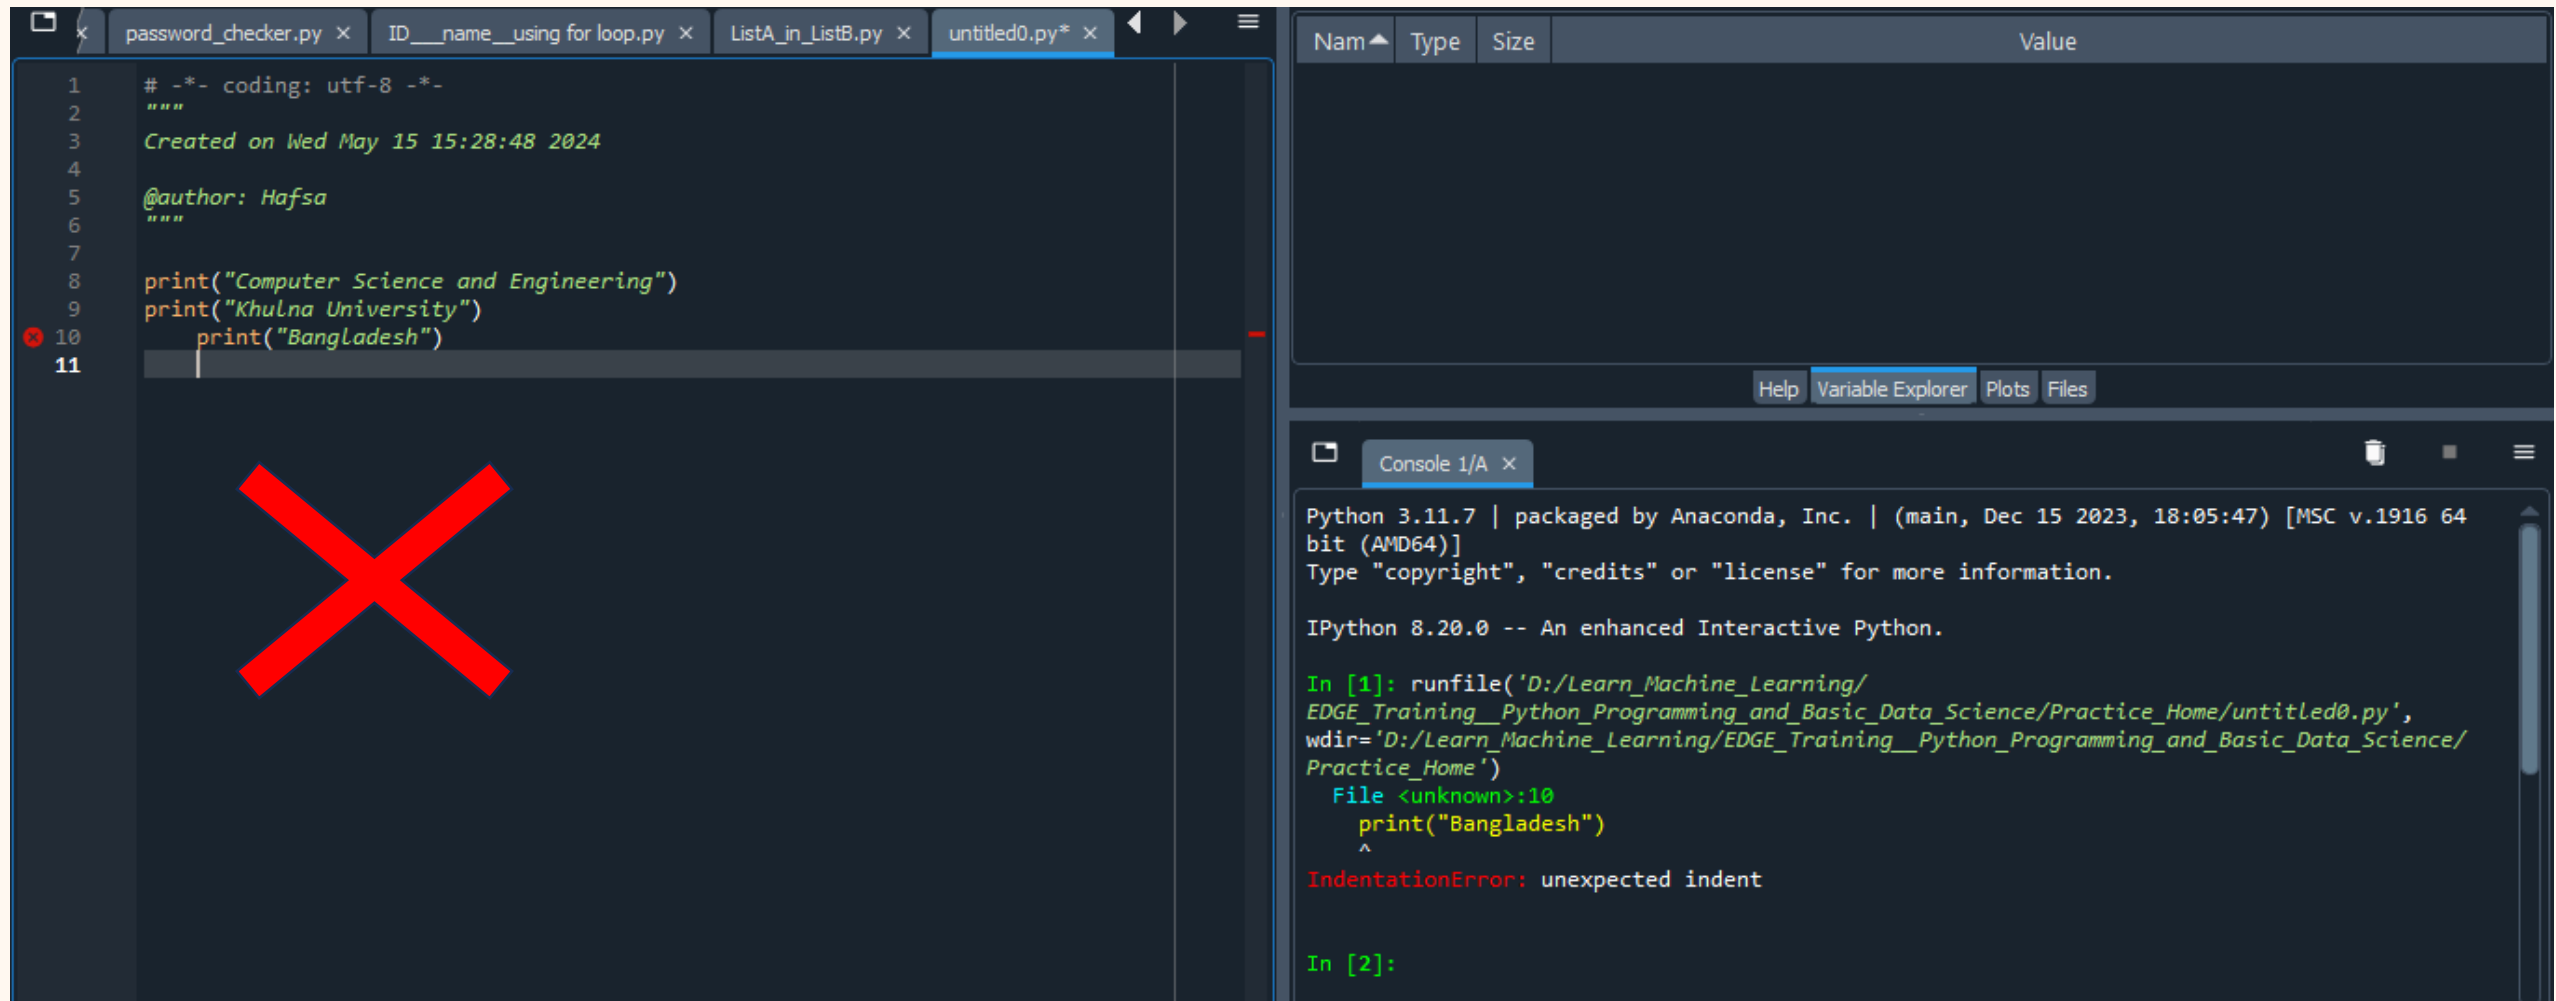

```
1 print("Hello, World!")  
2
```

Output

Hello, World!

=== Code Execution Successful ===

# Python Indentation

```
1  # -*- coding: utf-8 -*-
2  """
3  Created on Wed May 15 15:28:48 2024
4
5  @author: Hafsa
6  """
7
8  print("Computer Science and Engineering")
9  print("Khulna University")
10 print("Bangladesh")
11
```

Console 1/A x

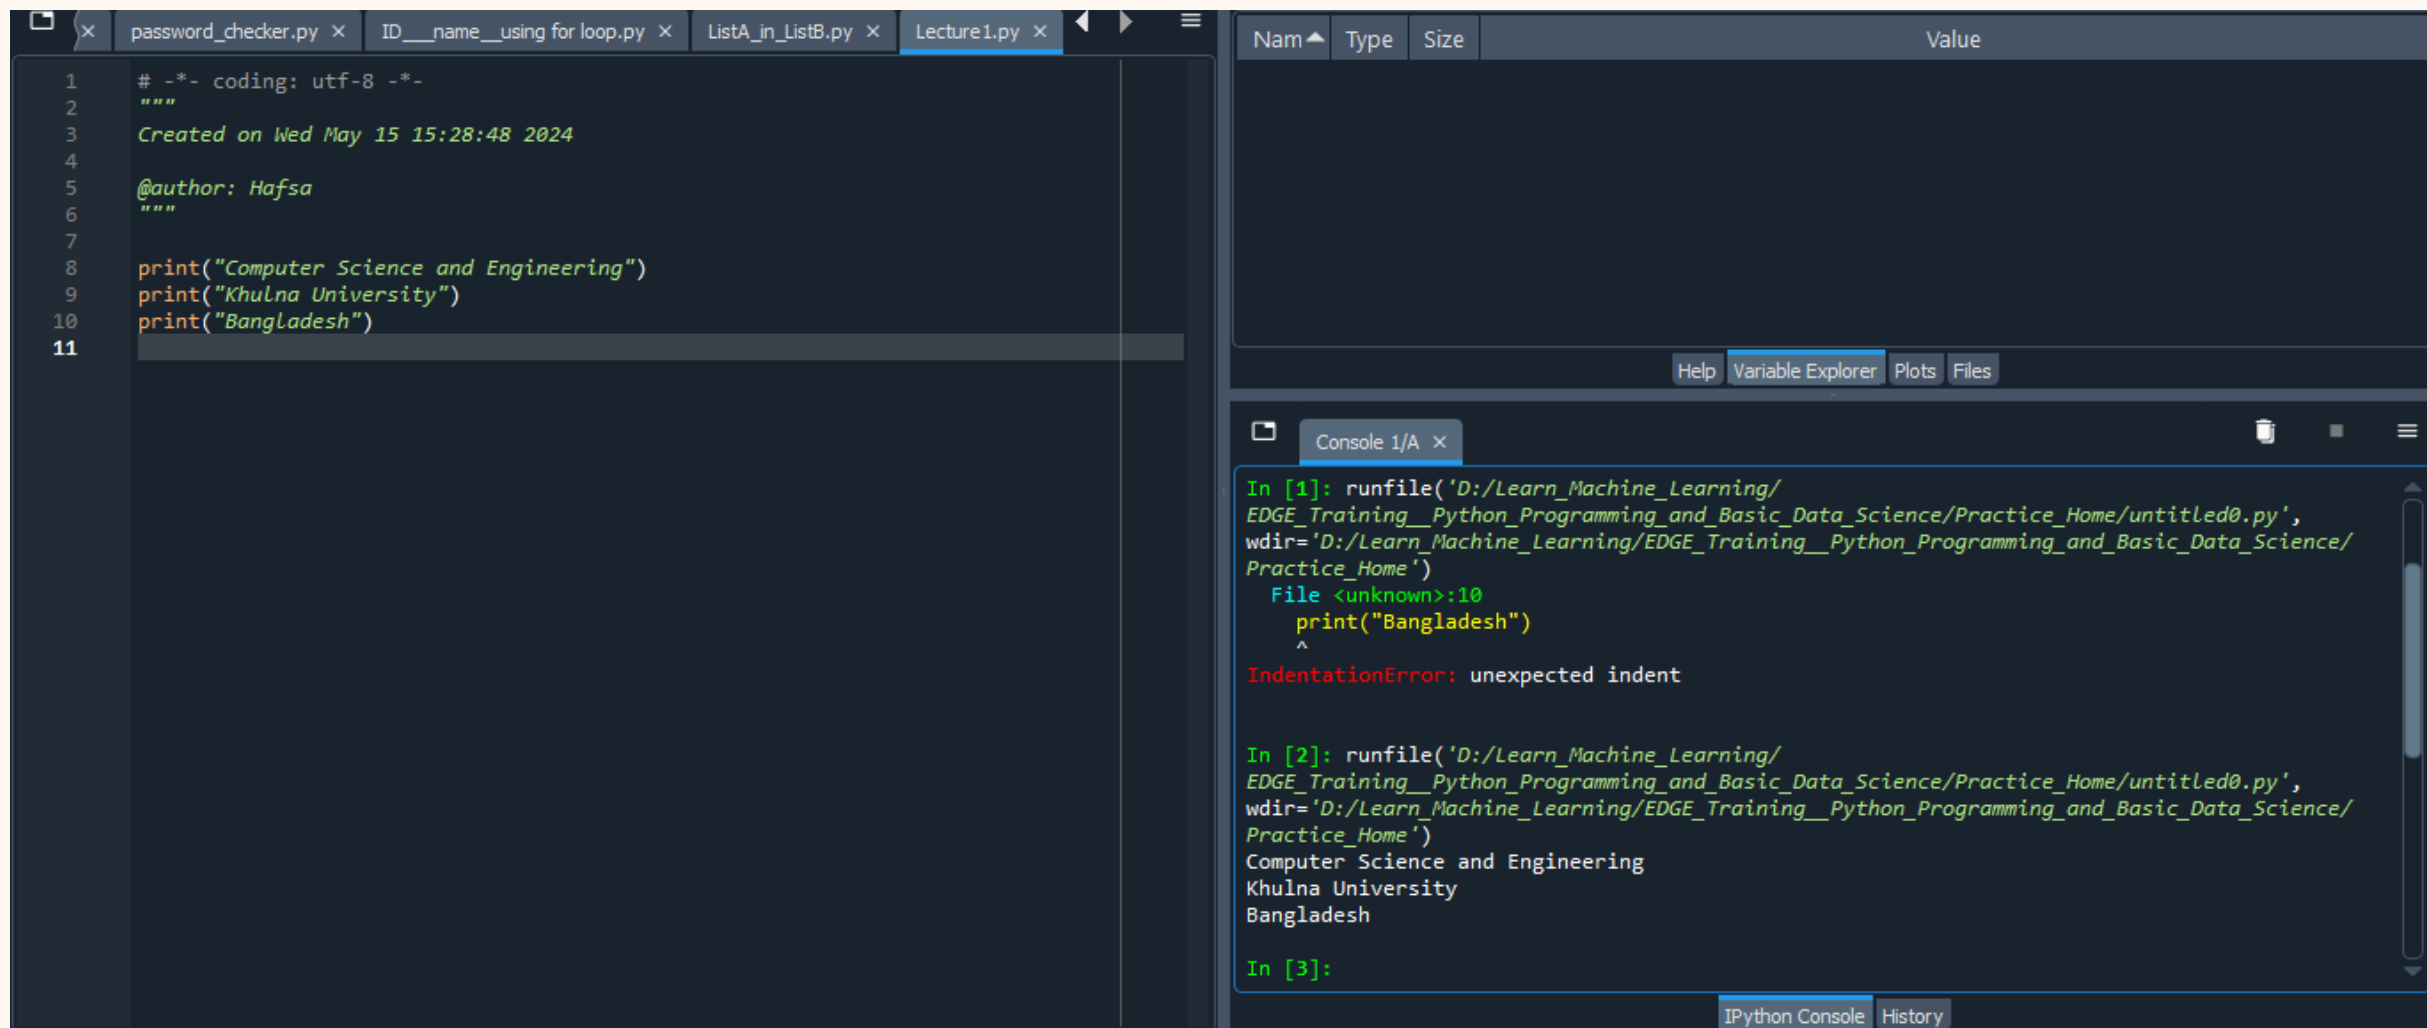

Python 3.11.7 | packaged by Anaconda, Inc. | (main, Dec 15 2023, 18:05:47) [MSC v.1916 64 bit (AMD64)]  
Type "copyright", "credits" or "license" for more information.

IPython 8.20.0 -- An enhanced Interactive Python.

In [1]: runfile('D:/Learn\_Machine\_Learning/  
EDGE\_Training\_Python\_Programming\_and\_Basic\_Data\_Science/Practice\_Home/untitled0.py',  
wdir='D:/Learn\_Machine\_Learning/EDGE\_Training\_Python\_Programming\_and\_Basic\_Data\_Science/  
Practice\_Home')  
File <unknown>:10  
 print("Bangladesh")  
 ^  
IndentationError: unexpected indent

In [2]:

# Python Indentation

The screenshot shows a Python IDE with a code editor on the left and a console window on the right. The code editor contains a file named 'Lecture1.py' with the following code:

```
1 # -*- coding: utf-8 -*-
2 """
3 Created on Wed May 15 15:28:48 2024
4
5 @author: Hafsa
6 """
7
8 print("Computer Science and Engineering")
9 print("Khulna University")
10 print("Bangladesh")
11
```

The console window shows the output of the code execution. It displays an `IndentationError: unexpected indent` for the first run, followed by the output of the second run:

```
In [1]: runfile('D:/Learn_Machine_Learning/
EDGE_Training_Python_Programming_and_Basic_Data_Science/Practice_Home/untitled0.py',
wdir='D:/Learn_Machine_Learning/EDGE_Training_Python_Programming_and_Basic_Data_Science/
Practice_Home')
File <unknown>:10
    print("Bangladesh")
    ^
IndentationError: unexpected indent

In [2]: runfile('D:/Learn_Machine_Learning/
EDGE_Training_Python_Programming_and_Basic_Data_Science/Practice_Home/untitled0.py',
wdir='D:/Learn_Machine_Learning/EDGE_Training_Python_Programming_and_Basic_Data_Science/
Practice_Home')
Computer Science and Engineering
Khulna University
Bangladesh

In [3]:
```

# Python Comment

## Example

```
print("Hello, World!") #This is a comment
```

## Example

```
""  
This is a comment  
written in  
more than just one line  
""  
print("Hello, World!")
```

## Example

```
#This is a comment  
#written in  
#more than just one line  
print("Hello, World!")
```

# Input and Output (print function)

`print()`

The `print()` function is used to display output in the console or terminal.

`input()`

The `input()` function allows the user to provide data or instructions to the program.

Variables

Variables are used to store and manipulate data in your programs.

Strings

Strings are used to represent text in Python, and can be used with the `print()` and `input()` functions.

# Fun and Interactive Coding Exercises

1

## Greeting Message:

```
name = "Sajid"  
print("Hello,", name, "!")  
#output- Hello Sajid!
```

2

## Sum of Two Numbers:

```
num1=5  
num2=6  
sum = num1 + num2  
print("Sum:", sum)  
#Output = Sum:11
```

3

## Repeating a Message:

```
message = "Be Honest."  
repeat = 5  
print(message * repeat)  
#Output: Be Honest.Be Honest.Be  
Honest.Be Honest.Be Honest.
```

Practice... Practice...  
Practice...

# Where to Learn More About Python

## Online Tutorials

Websites like Python.org, w3schools, Codecademy, and Udemy offer interactive tutorials and courses for learning Python.

## Books and Ebooks

There are many great books and ebooks available that provide in-depth coverage of the Python language and its applications.

## Python Community

Joining online communities like Python subreddit or Python meetup groups can provide valuable support and resources.

## Project-Based Learning

Building your own projects is one of the best ways to solidify your Python skills and learn new concepts.

# Any Question??
